

**i2LGARBI project** promotes collaboration between different groups of companies involved in the manufacture of components related to vehicle interiors. It also seeks to generate new value chains within and outside the consortium.

The automotive sector is moving towards sustainable mobility where efficiency and smartisation are part of the evolution guidelines.

Component manufacturers are facing challenges through the development of intelligent and advanced components that lay the foundations for the vehicle of the future, as well as the creation of new value chains that respond to the challenges posed in terms of manufacturing, connectivity, technological evolution, lightweighting and customisation.

Glavista collaborates with the other companies in the I2lgarbi project, contributing its know-how in the automotive glass sector. In this way, Glavista promotes the dissemination, exploitation and transfer of knowledge to the rest of the sector, fostering new value chains that promote Basque industry in the development and manufacture of automotive glass.

Basque industry in the development and manufacture of interior elements for the vehicle of the future.

The I2lgarbi project has been promoted and subsidised by the Department of Economic Development, Sustainability and Environment of the Basque Government and the European Union through the FEDER.
